Atiq Gauri

Full Stack Developer & Concept Designer

gauriatiq@gmail.com

Full Stack developer with C++ experience, I have developed cross-platform electronJS and node.js application from scratch, including database, CI/CD, dockerization and C++ backend. Server side I have made several APIs with express.js, node.js and many BaaS projects with firebase and netlify. Other skills include unit testing, basic machine learning with python and concept design.

Skills

C++ Advanced	**Github and Actions** Advanced	**Node.JS** Above Intermediate	**JS, HTML, CSS** Advanced
CI/CD Intermediate	**Concept Design** Advanced	**BaaS** Advanced	**Unit Testing** Basic
Express.js Intermediate	**Machine Learning** Intermediate	**Docker** Basics	**Python** Basic

Experience

- **Software Development Engineer @ Winuall**
  November 2020 - Present

  A product based startup reaching great heights. I am writing backend code there which is serving to ~100K users. Other than that I have built & maintaining complete sub product, analytics dashboard of the company. Which involve tracking all statistics of company's data. Tech stack include node.js, express.js, mongoDB, test server management(mostly Google cloud) and basic react.js.

- **Full Stack Dev Internship @ SecurityEscape**
  September 2018 - March 2020

  Worked with application security engineering team to develop a system to use password prediction on common open dev panels. My role was to write analyser to generate patterns out of known breaches.

Freelance & Projects

- **Patternscape**
  June 2019 - September 2020

  It detect patterns in passwords by processing data breaches. It's a cross-platform app made with electronJS and C++ backend, include database and ci/cd. Developed single handedly from scratch. I have written huge 120 pages documentation for everything related to patternscape project.

  Open-source Code Project Wiki Project Overview

- **Zoom UI automation**

  Wrote "windows" specific C++ multithreaded code to interact with zoom meeting app UI. And converting it to full fledged cross-platform electron desktop app. It was a freelance project, so can't show you the code but here is a word from client and more can be found on my linkedIn page: "*Atiq has proven to be nothing less than exceptional. His quality of work is excellent, he is able to manage projects to completion with little or no oversight, a real go-getter. You can give him a goal, and then just get out of his way. He will come back to you with a rock solid solution.*"

  Product Website

- **Mini Projects**

  These Projects include web apps for bitcoin payment implementation, realtime crypto exchange ticker, User authentication, Restful api and web sockets. Most of them hosted and uses firebase and netlify features like functions, hosting etc.

  Overview

- **Rajshastra**
  December 2018 - April 2019

  A political simulation game based on Indian elections. It includes ideological population and political parties with resource management mechanics. I worked on it as a game and concept designer.
